ADVANCED PERIO/OS SESSION II

DECEMBER 14TH, 2019

ONE-DAY TRAINING ■ 6 CE HOURS

COURSE DESCRIPTION:

This one-day comprehensive laser course for advanced laser users is a continuation of the Advanced Periodontics & Oral Surgery: Session I. Demonstration of the use of the Diode and the Waterlase in more advanced use of laser-assisted periodontal surgery, oral surgery, and implant surgery.

Clinical cases will be presented in slides and videos. In addition, there will be Hands-On exercises. Each participant will have an opportunity to perform some of the procedures on bovine jaw tissue with over-the-shoulder tutoring. In addition, insurance and post-treatment care will be presented.

This program include literature review and step-by-step presentation on laser-assisted hemostasis, new attachment procedure, open-flap periodontal surgery such as furcation surgery, subepithelial connective tissue graft, covering of exposed root surfaces, pedicle graft, double papillae graft, advanced regenerative material, and membranes and growth factor use, management of laser assisted extraction of teeth from patients on blood thinner, new hemangioma therapy, vestibuloplasty, apicoectomy, reverse vestibuloplasty, esthetic crown lengthening, cracked tooth diagnosis and treatment, steps for Physics Forceps, laser-assisted extraction with implant placement, sinus lift, implant surgery, salvaging failing implants, new abutment system for implants, the use of LLLT after surgery, and more...
