

Advanced Waterlase In General Dentistry

This is an advanced training in laser analgesia. Presentation of the Science behind the Waterlase procedure with injection anesthesia. References from animal studies to clinical studies will be shown to explain the current recommendation of laser settings that enable the practitioner to reach over 90% success in performing Waterlase “No Shot” “No Pain” procedures.

Over-the-shoulder clinical demonstration of advanced Waterlase applications with an emphasis on techniques that maximize patient comfort will be performed by Dr. Chen and other instructors. Dr. Chen will also give information on topics such as, designs and functions of different fiber tips, selection of variable hertz in hard and soft tissue procedures, patient education, assessment and management techniques. Advanced clinical procedures, restorative dentistry, endodontics, oral surgery, periodontics and pedodontics will also be demonstrated using both the Waterlase and the Diode.
